

## SQL Fundamentals GREENHOUSE

---

Create SQL commands to provide information for the following problems.

1. Greenhouse: How many plantings have there been for each crop type? Show the crop type and the crop-planting count. Sort by the count in descending order.
2. Greenhouse: What crops are of the ROOT type? Show the crop type and the crop name. Sort by crop name.
3. Greenhouse: What are the varieties of the root type crops? Show the crop type, the crop name, and the variety name. Sort by crop name then variety.

### ***What to do:***

1. In one file write all the SQL commands.
2. Before each command add the problem statement as a comment line.
3. The file must be simple text file with a TXT or SQL file extension. File need to be saved with your last name\_SQL\_STATEMENT\_USED, and your name should be included in a comment line format
4. Test your commands and make sure they are error-free before submitting the solution file.

Refer to the book and powerpoint for examples.
